SILVER
2ND STEP
BRASS

SP-211 (2nd SILVER STEP) is a different machine, uses different compound, makes different work than PMG (1st SILVER STEP). PMG give better results in the outsides.

SP-211 2nd SILVER STEP REACHES RECESSED AREAS, INSIDES, FILIGREE AND JEWELS WITH STONES CAST IN PLACE.

Does not affect stones, enamelling, and non conductive surfaces.

SP-211 makes now in a few minutes the MOST DIFFICULT WORK in finishing process, impossible for other automatic or mass processes, and very difficult and costly to do by hand. Easy. Automatic.

SP-211 makes your design much more free, since does not round prongs or angles and follows most accurately the contour of your design.

SP-211 can process practically all pieces normal in jewellery, even colliers or chains, enabling to process very heavy and very light pieces, at the same time.

SP-211 will:

- INCREASE your production,
- INCREASE your quality
- DECREASE your cost
- DECREASE your metal loss

RECOVERY THE METAL REMOVED - All metal removed will remain in the machine.
